# PROJECT REPORT

**NAME OF STUDENT - ISHAN SINGH**

**REGISTRATION NO - 25BCE10990**

## 🔹 1. Introduction

This project is a simple **Expense Tracker system developed using Python**. It helps users record and manage their daily expenses in an organized way. The program allows users to add expenses, calculate monthly expenses, and find the total yearly expenditure.

This project is designed for beginners and uses basic Python concepts such as lists, loops, functions, and conditional statements.

---

## 🔹 2. Objectives

- To understand basic Python programming concepts
- To develop a real-life problem-solving application
- To track and manage expenses efficiently
- To calculate monthly and yearly expenses easily

---

## 🔹 3. Basic Concepts Used

The project is built using the following Python concepts:

- **List:** Used to store expense data
- **Functions:** For modular programming (add, monthly, yearly)
- **Loops:** To iterate through expense records
- **Conditional Statements:** To control user choices
- **User Input:** To take data from user

---

## 🔹 4. Working of the Program

The program works using a **menu-driven approach**:

1. **Add Expense**
    - User enters month, expense name, and amount
    - Data is stored in a list
2. **Monthly Total**
    - User enters a month
    - Program calculates total expenses for that month
3. **Yearly Total**
    - Program calculates total expenses of all months
4. **Exit**
    - Program stops execution

---

## 🔹 5. How to Use the Program

1. Run the Python file
2. Select an option from the menu
3. Enter required details
4. View results on the screen

**Example:**

- Add expense → Jan, Food, 200
- Add expense → Jan, Travel, 100
- Monthly total (Jan) → 300
- Yearly total → 300

---

## 🔹 6. Importance of the Project

- Helps users manage their daily expenses
- Builds strong programming fundamentals
- Demonstrates real-world application of Python
- Useful for students and beginners

---

## 🔹 7. Benefits

- Simple and easy to use
- No external libraries required
- Helps in financial awareness
- Improves logical thinking
- Can be upgraded further (file handling, GUI, database)

---

## 🔹 8. Limitations

- Data is not saved permanently (lost after program ends)
- No graphical interface
- Limited features

---

## 🔹 9. Future Enhancements

- Add file handling to save data permanently
- Create graphical interface (GUI using Tkinter)
- Add category-wise expense tracking
- Add charts and reports

---

## 🔹 10. Conclusion

The Expense Tracker project is a simple yet effective application that demonstrates the use of Python in solving real-life problems. It helps users track their expenses and understand spending patterns. The project also strengthens basic programming skills and can be extended into more advanced applications in the future.
